Abstract

The present invention describes novel anti-bacterial compounds of formula (I).

$$R^{1} \xrightarrow{X^{1}} X^{1} \xrightarrow{X^{4}} R^{2}_{m}$$

$$X^{2} \xrightarrow{X^{3}} X^{5} \qquad (I)$$

These compounds are, amongst others, of interest as inhibitors of Topoisomerase IV (Topo IV) as well as of DNA gyrase.
